

Parking Attendant Guide

Cebuana Lhuillier Parking Reservation System

Version: 2.4 | Last Updated: May 5, 2026

1. Overview

As a Parking Attendant, your role is to manage the daily parking operations on-site. You are responsible for:

- Viewing daily reservations for your assigned building(s)
- Confirming arrivals when vehicles park
- Reporting no-shows for users who did not arrive
- Scanning QR codes to verify reservations

Your role at a glance

-  Confirm arrivals (manually or by scanning the parker's QR code).
-  Mark no-shows when a reservation's window has elapsed and nobody arrived.
-  See only the buildings your admin has assigned to you.
-  Create, edit, or cancel reservations on behalf of users — that's an admin action.
-  Change building / floor / slot configuration.

 **If your site is in Self Check-In mode**, the parkers confirm themselves through their own app. Your dashboard remains available as a fallback (you can still confirm or mark no-shows manually), but the day-to-day flow happens without you. Ask your admin if you're unsure which mode your site is in.

2. Logging In

1. Open the Parking Reservation System in your browser (works on mobile and desktop).
2. Enter your **email** and **password**.
3. Click **Sign In**.
4. You will be redirected to the **Attendant Dashboard**.

First-time login: You will be asked to change your temporary password before proceeding.

3. Attendant Dashboard

Your dashboard is the main workspace. It shows:

3.1 Summary Cards

Three cards at the top show counts for the selected date:

Card	Description
Reserved	Reservations with status "Pending" (not yet confirmed)
Confirmed	Reservations confirmed by you (arrival verified)
No Shows	Reservations marked as no-show

3.2 Building Filter

If you are assigned to multiple buildings, use the **building dropdown** to filter reservations by building.

3.3 Date Navigation

- Use the **left/right arrows** to move between dates.
- The current selected date is displayed prominently.
- A **"Today"** button appears when you navigate away from today's date. Click it to quickly return to the current date.

3.4 Reservation Cards

Each reservation card displays:

- **User name** and vehicle plate number
- **Parking slot** (building, floor, slot label)
- **Time** (start — end)
- **Status badge** (Pending, Confirmed, No Show, Cancelled)
- **Action buttons** (Confirm, No Show) — only visible for today or past dates

4. Confirming Arrivals

When a vehicle arrives at the parking area:

1. Find the reservation on the dashboard (search by name or plate number).
2. Click the **"Confirm"** button on the reservation card.
3. The status changes from **Pending** to **Confirmed**.

***Tip:** You can also confirm by scanning the user's QR code (see Section 6).*

5. Reporting No-Shows

If a user does not arrive by their scheduled time:

1. Find the reservation on the dashboard.
2. Click the **"No Show"** button.
3. The reservation status changes to **No Show**.

5.1 What Happens When You Report a No-Show

- The reservation status is set to "No Show".
- A **no_show_at timestamp** is recorded (the exact time the no-show was reported).
- The user's **no-show count** is incremented.
- A **notification** is automatically sent to the user informing them of the no-show.
- If the building has **auto-release** enabled, the slot is released back to "available" after a configured number of minutes **from the time of the no-show report** (not from the reservation end time).

5.2 Important Rules

- You can **only** report no-shows for reservations with **"Pending"** status.
 - The "No Show" button is **hidden** for confirmed reservations — once confirmed, a no-show cannot be reported.
 - The "No Show" and "Confirm" buttons are **hidden** for future dates — this prevents accidental no-show reports.
 - You **cannot** report a no-show for a reservation that is already cancelled or completed.
-

6. QR Code Scanning

Each reservation has a unique QR code that the user can present at the parking entrance.

6.1 How to Initiate a QR Scan

The attendant dashboard has a **Scan QR** button in the top-right of the header.

1. Click the **Scan QR** button (QR icon) in the dashboard header.
2. A dialog appears prompting for a **QR Token**.
3. Ask the parker to show their QR code. The token is displayed below the QR image on their booking confirmation screen.
4. Enter the token and click **Look Up**.
5. The system loads the reservation detail page showing:
 6. User name
 7. Vehicle plate number
 8. Building, floor, and slot
 9. Date and time
 10. Current status
11. If valid, click **"Confirm"** to mark the arrival.

***Tip:** If the parker can show their phone, you can read the token directly from the QR confirmation page or ask them to read it aloud.*

7. Auto No-Show System

The system has an automatic background process that helps manage no-shows:

- Every **5 minutes**, the system checks for **pending** reservations where:
 - The date has passed, OR
 - The reservation's end time has elapsed for today
- These are automatically marked as **no-show**, a **no_show_at** timestamp is recorded, and users are notified.
- If the building has **auto-release** enabled, the slot is released back after the configured release period **from when the no-show was tagged** (based on the **no_show_at** timestamp, not the reservation end time).
- When a slot is released and the building has **waitlist** enabled, the next user on the waitlist is automatically notified that a slot is available.

As an attendant, you can still manually report no-shows during the day — the auto system handles the ones that slip through.

8. Daily Workflow

Here's a recommended workflow for a typical day:

Time	Action
Start of shift	Log in → Select your building → Check today's reservations
Throughout the day	Confirm arrivals as vehicles come in
Mid-day check	Review any pending reservations → Report no-shows for morning slots that weren't confirmed
End of shift	Final review → Report remaining no-shows → The auto system will catch anything you miss

9. Tips & Best Practices

1. **Stay on today's view** — Use the "Today" button to quickly return if you've navigated to other dates.
2. **Use the building filter** — If you're assigned to one building, it will auto-filter for you.
3. **Confirm early** — Confirming arrivals promptly helps track real-time occupancy.
4. **Don't rush no-shows** — Wait until the reservation's start time before reporting a no-show. The user may be running late.
5. **Check the summary cards** — They give you a quick overview of how the day is going.

10. Troubleshooting

Issue	Solution
No reservations showing	Check the date and building filter. Ensure you're looking at the correct date.

Issue	Solution
"Confirm" / "No Show" buttons not visible	Buttons only appear for today and past dates. Navigate to the correct date.
"Cannot report no-show for a future reservation"	This is a safety guard. You can only report no-shows for today or past dates.
Session expired	Sessions expire after 30 minutes. Log in again to continue.
QR code scan not working	Ensure the QR code is clear and the URL is correct. Try manual lookup if scanning fails.
